

Project Design Phase
Problem – Solution Fit Template

Date	03 October 2026
Team ID	SWTID-2026-1951
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS - Service desk agents and incident callers who create and update Incident records. - ServiceNow admins / developers who configure the Incident form. - IT support teams that depend on accurate incident data.	6. CUSTOMER CONSTRAINTS CC - Only users with admin or developer role can create UI Policies and Client Scripts. - Needs a ServiceNow instance (PDI) with Incident Management enabled. - Form rules must not slow down the form or require the form to be submitted. - No budget for AI / ML tools – solution must be rule-based.	5. AVAILABLE SOLUTIONS AS - Manual checking by agents – slow and inconsistent. - Server-side Business Rules / Data Policies – validate only after submit, no instant guidance. - Training and documents – users forget them while working.	Explore AS, differentiate
Focus on J&P, tap into BE, understand RC	2. JOBS-TO-BE-DONE / PROBLEMS J&P - Fill the Incident form correctly and quickly. - Get immediate guidance as field values change. - Stop invalid or incomplete data before it is saved. - Keep inline list edits consistent with the form rules.	9. PROBLEM ROOT CAUSE RC - The default Incident form does not react to what the user does. - Fields depend on conditions (e.g. Urgency) but nothing enforces them live. - Most validation happens only after submit, so errors are found late and incorrect data gets entered.	7. BEHAVIOUR BE - Agents re-read the form and fix fields manually after save errors. - They ask colleagues which fields are needed. - Admins add mandatory flags and server checks after problems are reported. - Indirect: agents edit records in the list view for speed.	Focus on J&P, tap into BE, understand RC
Identify strong TR & EM	3. TRIGGERS TR - Seeing incorrect or incomplete incidents in the queue. - Repeated rework and reopened tickets. - Project milestone: improve Incident form user experience.	10. YOUR SOLUTION SL - UI Policy and UI Policy Action (Urgency) set field behaviour live on the Incident form. - onChange Client Script reacts as soon as a field value changes. - onSubmit Client Script validates data (save validation) before the record is saved. - onCellEdit Client Script checks inline list edits. - Result: guidance at the right moment and fewer invalid records – no AI / ML needed.	8.1 ONLINE CH - Use the Incident form and list in a browser (Chrome, Edge, Firefox). - Follow on-screen messages; admins configure rules in System UI.	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM - Before: confused, unsure, frustrated by save errors. - After: confident, guided and in control of the form.		8.2 OFFLINE CH - Team and mentor discussion and review. - Test cases and documentation for new agents.
